

# DO YOU HAVE OPIOID WITHDRAWALS?

Get the hope you need to take the next step in treatment.

# Bridge<sup>TM</sup>

Drug-Free Opioid Withdrawal Device

# Who Can Bridge Help?

---

Bridge is designed to help people\* with opioid withdrawal symptoms. These symptoms can happen when:

- Starting medication-assisted treatment (MAT)
- Transitioning to naltrexone
- Tapering off MAT
- Tapering off opioid therapy

# What Is Bridge?

---

The small device is battery-powered and is applied behind the ear, sending gentle electrical impulses to your nerves which are transmitted to the brain to reduce withdrawal symptoms.<sup>†</sup>

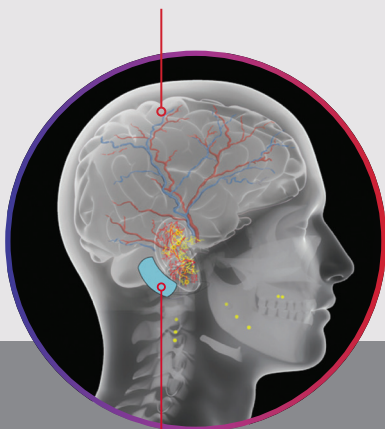

Applied by a healthcare worker—  
no surgery needed

Is comfortable  
behind the ear

Stimulated nerves transmit these  
impulses to the brain, reducing  
withdrawal symptoms

Provides five days of  
nonstop relief

Sends gentle electrical impulses  
to nerves around the ear

# Fast, Effective Relief from Opioid Withdrawal Symptoms<sup>1</sup>

## Clinically Proven

Demonstrated in a 73-patient clinical study to reduce withdrawal symptoms<sup>1</sup>

## Fast

May provide relief from opioid withdrawal symptoms, in as little as 20 minutes<sup>1</sup>

## Effective

Patients experienced an 85% reduction in symptoms of opioid withdrawal within 1 hour<sup>1</sup>

## Safe

No reported side effects with minimal risks during device placement<sup>2</sup>

## Comfortable

Device fits comfortably behind the ear and provides five days of nonstop relief

## Treatment Progression

Quick relief means a bridge to the next step in treatment
