Root® with SedLine®
Brain Function Monitoring
A More Complete Picture Starts With More Complete Data

Root with SedLine Brain Function Monitoring helps clinicians monitor the state of the brain under anesthesia with bilateral data acquisition and processing of Electroencephalogram (EEG) signals

- Four simultaneous channels of frontal EEG waveforms
- Patient State Index (PSi) is a processed EEG parameter that is related to the effect of anesthetic agents
- A Density Spectral Array (DSA) display, which contains left and right spectrograms representing the power of the EEG on both sides of the brain
- Multiple screen views, which expand information while enabling customization in the operating room and intensive care unit
Monitor Display

Patient State Index (PSi), a processed EEG parameter related to the effect of anesthetic agents.

The DSA represents activity in both sides of the brain.

The SedLine EEG Sensor

- Four active leads collect data from the frontal lobe.
- Allows simultaneous application of SedLine and O3® Regional Oximetry sensors.
- Soft foam pads improve patient comfort.

Sensor Specifications

- Patient Weight ................. > 30 kg
- Application Site ................. Forehead
- Active Channels ................. 4
- Active Electrodes ................. L1, L2, R1, and R2
- Ground Electrode ................. CB
- Reference Electrode ................. CT
- Duration of Use ................. Maximum of 24 hours
- Latex Content ................. Does not contain natural rubber latex

Caution: Federal (USA) law restricts this device to sale by or on the order of a physician. See instructions for use for full prescribing information, including indications, contraindications, warnings, and precautions.
