Kite™
Expanded Visibility of Patient Data

Kite provides a supplemental display of data from a Masimo device

> Display patient data from Masimo monitors on compatible smart devices
> Configure the display differently than that of the connected Masimo device
> Integrates into existing hospital infrastructures where a supplemental display may be beneficial, such as the operating room or cardiac theater
Configurable Display Options

By customizing what is displayed, Kite allows clinicians to focus on the most pertinent data for each stage of a patient’s care, empowering clinicians to make more informed decisions.

Configure Kite’s supplemental display to feature the most applicable data for the current patient or case.

Display data from modules connected through MOC-9™ ports to Root®, such as SedLine® brain function monitoring, O3™ regional oximetry, or an ISA™ EtCO₂ module.

Display visual alarms from the patient monitor, providing quick notification of changes in a patient’s physiologic status.

Caution: Federal (USA) law restricts this device to sale by or on the order of a physician. See instructions for use for full prescribing information, including indications, contraindications, warnings, and precautions.
