Replica is a mobile application for supplemental remote monitoring and clinician notification that allows clinicians to view continuous monitoring data for multiple patients, as well as view and respond to alarms and alerts, from a smart phone, regardless of location.

- Displays near real-time data, including high-fidelity waveforms, from connected Masimo and third-party devices, helping clinicians more efficiently manage multiple patients through supplemental remote monitoring.

- Actionable two-way alarm notifications from Masimo and third-party devices are sent to active mobile devices, reaching on-duty and available clinicians, with intelligent escalation that:
  - Allows clinicians to quickly accept or forward alarms, helping improve clinical collaboration.
  - Enables automatic escalation to help ensure timely response.
Smarter Patient Data Management

With the increasing prevalence of high patient-to-clinician ratios, continuous visibility of the status of multiple patients on a mobile device can help clinicians manage patients more efficiently.

Intelligent Alarm Management

Actionable patient alarms are sent directly to clinicians, with automatic escalation, which can help clinicians respond to critical events more quickly and efficiently.

Specifications

**SOFTWARE REQUIREMENT**

Replica requires Patient SafetyNet™ Series. v5.5.4.4 or higher

Android OS: Minimum Version 5.0 (Lollipop)

**ORDERING INFORMATION**

Replica Software: 9863-LIC or 9863-SaaS
