

Pathway™

Newborn Oxygenation Visualization Mode for Root®

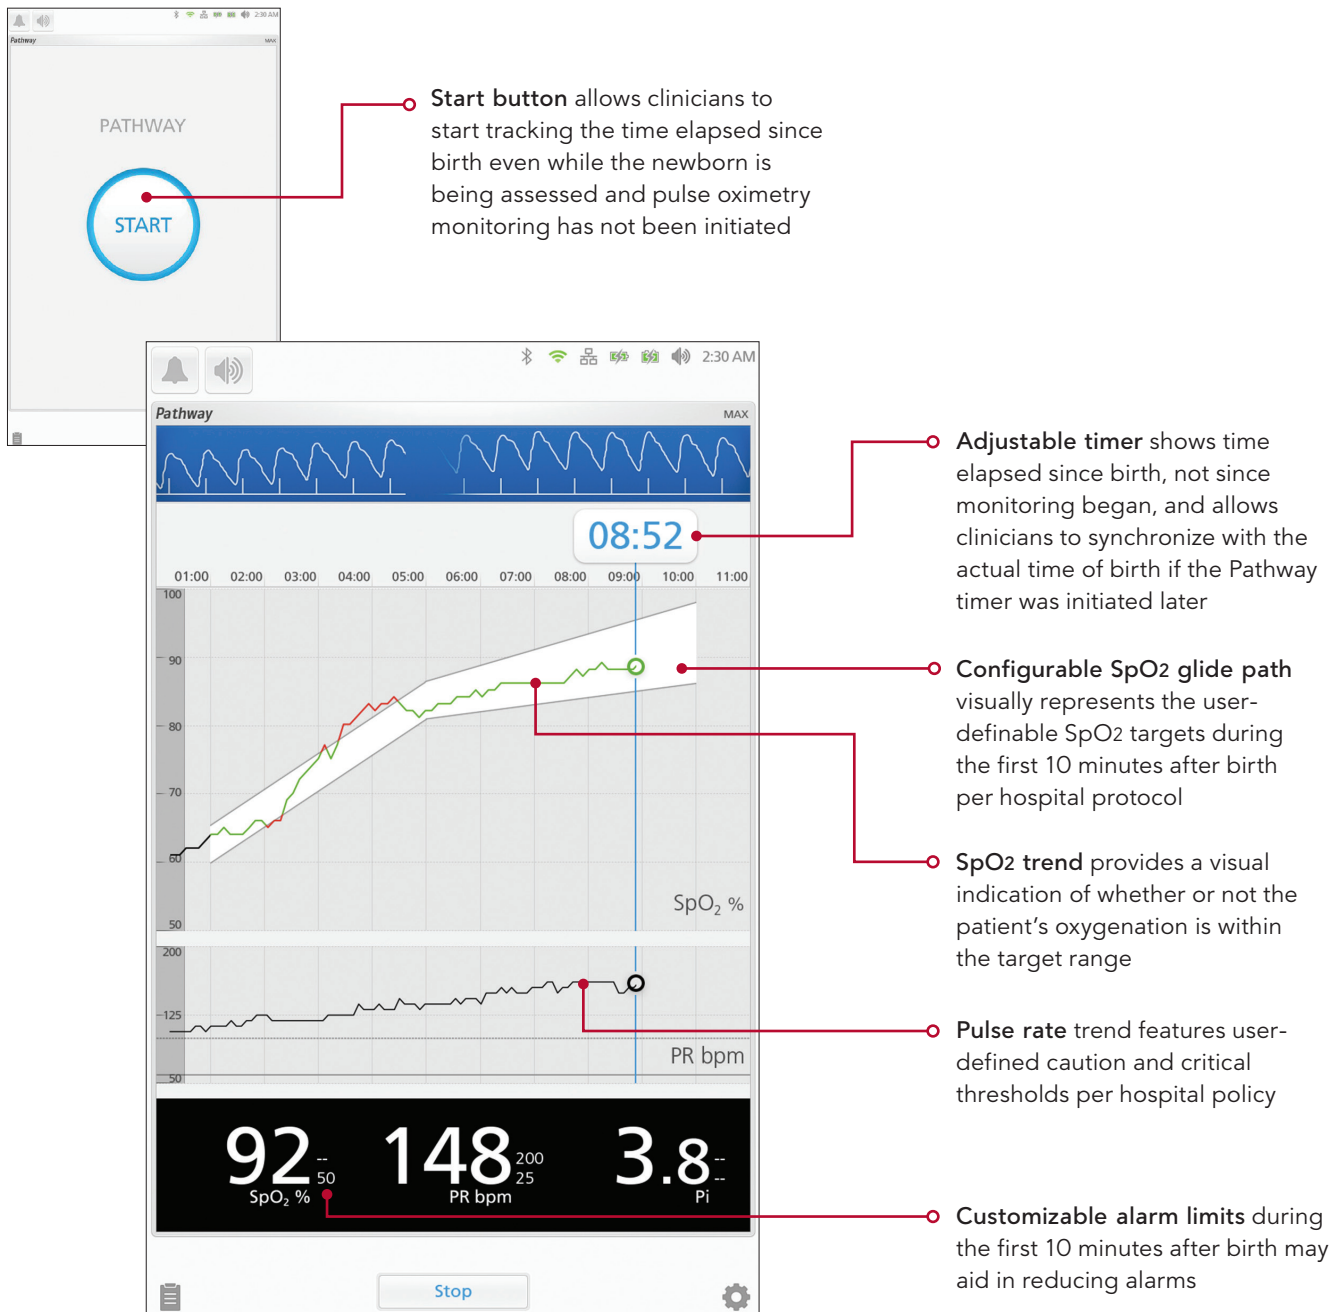

Pathway is an optional continuous monitoring mode available on the Root Patient Monitoring and Connectivity Platform. Designed to streamline clinician workflows and support adherence to neonatal resuscitation protocols, Pathway:

- > Supports clinicians in their time-based workflow for pulse oximetry monitoring during neonatal resuscitation in the first 10 minutes of life
- > Combines the proven accuracy and reliability of Masimo Signal Extraction Technology® (SET®) with data visualization features tailored to the labor and delivery environment
- > Displays a visualization of oxygen saturation (SpO₂) and pulse rate (PR) levels within user-definable thresholds
- > Transforms the Root display to provide a dynamic, intuitive interface with adjustable visualization ranges
- > Works in concert with Masimo Newborn sensors, which are tailored to support the unique physiology of newborns
